LEAP-YEAR, or *Biſſextile*, is every fourth year: It is ſo called, by reaſon it leaps a day more that year than in a common year; for in a common year any fix'd day of the month does change the day of the week to the day following; but in *Biſſextile*, it ſkips or leaps over a day. This *Leap-Year* is occaſioned by the odd 6 hours in a year, over and above 365 days, which odd hours make a day in 4 years; and becauſe the month of *February* is the ſhorteſt month in the year, this day is added thereto; ſo that every 4th year *February* has 29 days, and makes the year to conſiſt of 366 days; that is, two days above 52 weeks; and this is the ſole reaſon why, in *Leap-Year*, any fix'd feaſt (as *Chriſtmas Day* for Example) is found two days in the week further on than it was the year before. To know when it is *Leap-Year*, divide the year of our Lord by 4, and if nothing remains, it is *Leap-Year*; but if 1, 2, or 3 remains, then it is accordingly the 1ſt 2d, or 3d year after *Leap-Year*.
